

How to Unlock Hidden Profit in Your Dental Practice Without New Investment

jyler.com

THE CURRENT REALITY

Most dental practice owners make important **DECISIONS** based on incomplete or misleading **INFORMATION**.

You see gross revenue and rough margins. You push marketing and scheduling to keep chairs busy.

You work hard, invest money and still wonder **why net profit isn't growing as expected.**

RESULTS: Missed opportunities, hidden losses and inefficient resource use.

THE KEY INSIGHT

BETTER INFORMATION = BETTER RESULTS

The only way to significantly improve **RESULTS** is to make **DECISIONS** based on accurate **INFORMATION** :

- The true **NET PROFIT** of every **SERVICE** (after all real costs)
- Which **ACTIVITIES** are actually driving (or draining) profit
- Where the real **BOTTLENECKS** are in your operation

OUR PROVEN METHODOLOGY

✓ Turning Data into Strategic Decisions:

ACTIVITY-BASED COSTING (ABC) → Accurately determines the true cost and net profit of every service by tracing all real activities and resources – revealing what's actually profitable versus what only appears to be

THROUGHPUT OPTIMIZATION (TO) → Identifies the primary bottleneck limiting your overall profitability and shows how small targeted adjustments can significantly increase output and net profit without additional resources

WASTE ELIMINATION (LEAN) → Systematically removes inefficiencies and non-value-adding activities so you run a leaner smoother operation that delivers higher patient satisfaction and better financial results

Everything is based 100% on your actual PMS/ADA data – no assumptions, no generic advice.
